DETAILED ACTION

1. Claims 1-10 are pending and examined
2. Applicants' submission of "First Preliminary Amendment" filed on 1/18/02 is acknowledged.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over *WO 99/55837* (B1).

Art Unit: 1648

Present invention is basically a method of identifying a receptor in target tissue for which a selected vector has affinity by using encapsulated gas microbubbles to which the selected vector is coupled. *WO 99/55837* teaches the same targetable encapsulated gas microbubbles. *WO 99/55837* also gives motivation to target any marker in a sample (see Abstract, especially the last sentence). *WO 99/55837* does not teach retroviral particles containing a library of mRNA from the target tissue; however, it would have been *prima facie* obvious for one of ordinary skill in the art at the time the invention was made to utilize the well-known retroviral particle system of carrying a library of mRNA from any target tissue to introduce the target receptors on a cell line by transfection and to combine it with the microbubble system as motivated by *WO 99/55837*.

5. No claim is allowed.

6. Papers relating to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 located in Crystal Mall 1.
